OPERATING LENS REVIEW • WORKING CANVAS

Pittsburgh, Pennsylvania 412.287.8640 russelldudek@gmail.com linkedin.com/in/russelldudek russelldudek.github.io/CFS

Purpose: test whether a proposed data or AI intervention is focused enough to enter real work. Complete with the workflow owner, data steward, users, and technical/risk partners. This is a decision canvas, not a compliance checklist.

1 • FRAME THE WORK
What decision or workflow friction matters? Who owns the outcome? What is the baseline, consequence, and evidence of the current problem?

2 • SOURCE AND MEANING
Which reporting, CRM, document, workflow, or external sources are required? Which definition is canonical?

3 • OWNERSHIP AND QUALITY
Who owns each source and definition? What quality threshold, freshness, lineage, and exception rule applies?

4 • AI ROLE
Is AI retrieving, summarizing, generating, classifying, recommending, automating, or monitoring? What should it not do?

5 • HUMAN AUTHORITY
Which human remains accountable? What requires review, approval, abstention, override, or escalation?

6 • WORKFLOW INSERTION
Where does the intervention enter normal work? What screen, handoff, meeting, queue, or decision changes?

7 • ADOPTION OWNER
Who teaches, supports, observes, reinforces, and changes the standard? What new behavior is required?

8 • EVIDENCE
What measures trust, retained use, workflow flow, value, control, and learning? Is the baseline available?

9 • ARCHITECTURE AND VENDOR BOUNDARY
What is built, bought, connected, mirrored, transformed, or retired? What must remain internally understood and owned?

10 • EXCEPTION AND LEARNING PATH
What event triggers review? Who can stop or reroute the workflow? How does evidence revise data, controls, prompts, training, ownership, or product decisions?

DISPOSITION

PROCEED	REPAIR	HOLD	RETIRE
Focused enough to test	Fix named gaps first	Value/readiness not aligned	No defensible case

DECISION RECORD

Decision and owner	
Required repairs	
Evidence date	
Next review / escalation
